

Forklift Fork Positioners

Fork Positioner for Forklifts - A fork positioner is a tool made out of high quality materials meant to be able to endure the most challenging operations and work environments. This piece of equipment could enable the one driving to be able to work the blades hydraulically without leaving the seat. Side shifting units have the added ability to laterally position the entire load or the arms in order to facilitate much more precise lifting and placement in a quicker and much more effective method.

The fork pocket is rather unique and could enable the one operating it to be able to safely swing the blades into position without any worry of destroying the positioning cylinders. This could allow the operator the choice to perform simultaneous or independent fork movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are required. Standard OEM carriages could be transformed into fork positioners on available units.
