

Carriage Roller

Carriage Rollers - Carriage rollers are particularly designed bearings that are utilized on lift masts to be able to help them function in difficult environmental surroundings. Lift masts are normally subjected to shocks, oscillations, high dynamic and vibrations and static loads. This equipment is frequently exposed to environmental influences like for example dust, cold, heat, contamination, aggressive ambient air and moisture. Hence, the guidance arrangements of lift masts should be particularly robust and have a specific high load carrying capacity.

Carriage rollers have been created as the answer for working in different environmental surroundings. These bearings are the answer where the guidance arrangements of the lift masts have to be cost-effective and maintain operational security while having the ability to handle a specifically high load carrying capacity.
